

ADPQ: Utilizing Electric Cloud's ElectricFlow for Continuous Integration

CI Flow Project Order/Process

1. dev pushes to git
2. CI sentry pulls code and builds (npm install etc)
3. runs smoke tests
4. runs unit tests
5. runs coverage tests
6. runs other tests
7. packages in Docker container
8. stores in artifact repo
9. deploys container to Staging area (still on QA)
10. tests container deployment works
11. deploys to prod
12. starts service
13. verifies service is running
